ARTICHOKE

ARTICHOKE

MORADA

Morada is a thornless red Artichoke.

ARTICHOKE

YASILDA

Yesilda is a thornless green Artichoke.

ASPARAGUS

ASPARAGUS

MIXED

We sell only top quality F1 hybrids from the top breeders in the world. We can offer Purple shoots, Thin green and Thick green shoots varieties.

BABY CABBAGE

BABY CABBAGE

SUPREME GREEN

Baby Supreme Green is a baby cabbage with excellent uniformity and good internal quality. Baby Supreme Green has perfectly round heads and matures in approximately 50-60 days in the summer and approximately 60-70 days in the winter.

BABY CABBAGE

SUPREME RED

Baby Supreme Red is a baby cabbage which is at least 10 days quicker than most in the market. Baby Supreme Red matures in approximately 60 - 70 days in the winter and approximately 50 - 60 days in the summer with round heads.

BABY LEAF

BABY LEAF

SELECTION

In the Baby Leaf range we offer a large selection of products to use as baby leaf ONLY. Red Amaranth, Beetroot, Red Cabbage, Coriander, Corn Salad, Dill, Fennel, Parsley, Cultivated and Wild Rocket, Kale, Kohlrabi, Red & green Lettuces, Red & Green Mizuna, Green sten, White Stem & Purple Pak Choi, Purple and Green Radishes, Red, Yellow & Green Swiss Chard and Turnips to name a few. For more details on the Baby Leaf varieties feel free to contact the office.

BEANS

BEANS

BUSH PARKER

Parker is a bush green bean that bears pods 14 - 15 cm long, 7 - 8 mm thick with a smooth skin. The jelly in Parker remains firm for quite a long time after picking. We recommend a plant stand of a minimum of 250m seeds per Ha. This should yield in excess of 11 t per Ha over 4 picks. Parker is resistant to Halo Blight, Common Bean Mosaic Virus and Anthracnose. Parker has shown an excellent field tolerance to rust.

BEANS

CLIMBING ENGLISH RUNNERS

When it comes to English Runner beans we have 2 varieties. Enorma and Equator. Enorma has red flowers and produces runner beans between 30 and 32cm long. Equator is not day length sensitive, has white flowers and produces runner beans between 25 and 26cm long. Both Enorma and Equator have resistance to BCMV.

BEANS

CLIMBING MONTY

Monty is a climbing green bean bred for growing under cover. The pod is 13-14 cm long, 7-9 mm thick with a smooth skin. The jelly in Monty remains firm for quite a long time. We recommend a maximum plant stand of 24 m seeds per Ha. The control of red rust is imperative. Resistant to Bean Common Mosaic Virus.

BEANS

CLIMBING PURPLE

When it comes to purple climbing beans we have Violetta. Violetta grows on a purple vine with purple flowers and produces pods 15-18cm long and 9-10mm thick. Violetta has resistance to BCMV.

BEANS

CLIMBING YELLOW

When it comes to yellow climbing beans we have 2 varieties, Brooke and Smuts. Brooke grows to be 17-18cm long and 9-10mm thick and Smuts which will grow to be 16-17cm long and 9-11mm thick. Both have resistance to BCMV.

BEANS

LIMA

Lima beans grows on erected structures made out of poles and wires as Lima beans are climbing beans by nature that produce pods all the way up the structure.

BEETROOT

BEETROOT

BABY GLOBE

Baby Globe is a dark red skin, dark red flesh beetroot grown all year round for a baby beetroot. It has a very thin tap root.

BEETROOT

BULLS BLOOD

Bulls Blood is a red leaf, dark red skin, dark red flesh beetroot which can be grown all year round. It takes 80 days to maturity and can also be picked as a baby for a cocktail mix.

BEETROOT

CANDY STRIPE

Candy Stripe is a Red and White ringed flesh beetroot with a red skin.

BEETROOT

FROSTY

Frosty is a White skinned, white flesh beetroot which can be grown all year round. It takes 80 days to maturity and can also be picked as a baby for a cocktail mix.

BEETROOT

GOLDEN GLOBE

Golden Globe is a round yellow beetroot that has a golden skin and bright yellow flesh. It is very sweet to the taste.

BEETROOT

GOLDEN ROD

Golden Rod is an elongated yellow beetroot with yellow skin and yellow flesh.

BEETROOT

SCARLET ROD

Scarlet Rod is an elongated red beetroot, with dark red skin and dark red flesh.

BRINJALS

BRINJALS

AMARA

Amara has a thornless green calyx with a black skin. Amara works well in the pre pack segment as well as the boxing market. Amara is suited to both outdoor and indoor cultivation with high quality and exceptional yields.

BRINJALS

CLARE

Clare is a White Brinjal that weighs approximately 400-600 gr. The fruits remain oval shaped even when old. The flesh of Clare remains white. Clare has semi thorn less green calyx.

BRINJALS

COLOURED

In the Coloured Brinjal stable we have a huge selection of different colours and shapes. White Long Finger, Red Oval, Black Baby Egg, White Baby Egg, Pink & White Finger, Purple Tubular, Orange Pumpkin Shape and a Dark Purple Baby Egg to name but a few.

BRINJALS

CRIMSON BEAUTY

Crimson Beauty is an elongated red Brinjal that weighs between 50 – 70g and can be picked pink as a baby or red as a full size Brinjal. Crimson Beauty has a green calyx with no thorns.

BRINJALS

JETSTREAM

Jetstream is a Black Baby Brinjal that weighs between 30 – 35g and can be used for the local and export Baby Brinjal markets. Jetstream makes little "clusters" of fruit consisting of between 2 and 3 fruits. Jetstream has a smooth green calyx with no thorns.

BRINJALS

LUCILLE

Lucille has a white fruit with purple stripes. The teardrop shape makes it ideal for pre packing. Lucille has little to no thorns. The mature fruits are 20 x 8 cm and weigh between 400-550 gr. Lucille is a very productive variety.

BRINJALS

MALAGA

Malaga has a green thorn less calyx with a shiny black skin. Malaga works well in the pre pack and bulk segments and is of superior quality. Malaga is ideally suited for outdoor cultivation for high quality fruits and exceptional yields.

BRINJALS

RA

Ra is a White Brinjal that weighs approximately 40 – 80g. The fruits remain egg shaped even when old. The flesh of Ra remains white. Ra has semi thorn less green calyx.

BRINJALS

SEVILLE

Seville has a green thorn less calyx with a shiny black skin. Seville works well in the pre pack segment and is of superior quality. Seville is ideally suited for indoor cultivation of high quality and exceptional yields. Seville has resistance to Tmv.

BRINJALS

SNOWY

Snowy is a White Brinjal that weighs approximately 40 – 80g. The fruits remain egg shaped even when old. The flesh of Snowy remains white. Snowy has semi thorn less green calyx.

BROAD BEAN

BROAD BEAN

MAMARO

Mamaro has been specifically bred to have huge pips. There are roughly 400 seeds / kg. The pips are green. Mamaro is a short day type.

BROAD BEAN

SANTA MONICA

Santa Monica has been specifically bred to have 5-7 pips in a pod. There are 650 seeds / kg. The pips are Green. Santa Monica is a short day type.

BROAD BEAN

SUPREMO

Supremo has been specifically bred to have 6-8 pips in a pod. There are 900 seeds / kg. The pips are Green. Supremo is a short day type.

BROCCOLI

BROCCOLI

LONG STEM BASTONE

Long Stem Broccoli Bastone fits into the same class as the Registered and Trademarked variety Tenderstem. Bastone has very attractive stems with beautiful domed heads that can be used for both export and local markets. Bastone is rich in Vitamins and Iron and is widely adaptable thus making its mark in the culinary world. Bastone is ready to harvest 60-70 days from planting and picking for 4-6 weeks makes it an excellent choice. We recommend planting Bastone at a density of between 40-45m per Ha.

BROCCOLI

LONG STEM CANDELABRUM

Long Stem Broccoli Candelabrum is a trailblazer in its field as the first commercial purple long stem broccoli available in South Africa. Candelabrum fits into the same class as Menorah but only with purple curds against Menoras green curds. Candelabrum is widely adaptable and making its mark in the culinary world. Ready to harvest 55-60 days from planting and picking for 4-6 weeks makes it a valuable asset. We recommend planting Candelabrum at a density of between 40-45m per Ha.

BROCCOLI

LONG STEM MENORAH

Long Stem Broccoli Menorah fits into the same class as the Registered and Trademarked variety Tenderstem. Menorah has fairly thin but long stems that makes it desirable for the export and local markets. Menorah is rich in Vitamins and Iron and is widely adaptable thus making its mark in the culinary world. Menorah is ready to harvest 60-70 days from planting and picking for 4-6 weeks makes it an excellent choice. We recommend planting Menorah at a density of between 40-45m per Ha.

BRUSSEL SPROUT

BRUSSEL SPROUT

RUMPUN

Rumpun is an early short stem variety with a concentrated yield. Rumpun resists lodging and needs cold temperatures to ensure tight beads. We also have access to a purple variety.

CABBAGE

CABBAGE

CHINESE

In the Chinese Cabbage stable we have 3 different varieties. Bishop that is a 2kg Green Chinese Cabbage with Dm, Club Root, Soft Rot, Bolting resistance. Cardinal that is a Red Chinese Cabbage of 2 kg. Mystique which is a Baby Chinese Cabbage growing up to a maximum size of 1kg.

CABBAGE

POINTED SIROCCO

Sirocco is our Pointed Cabbage which matures at a weight of 1 - 1.5kg and takes roughly 50 - 60 days to do so. Tolerant to YR and BR. Small habit which allows a higher plant stand.

CABBAGE

RED PEARL

Red Pearl is a mature round head red cabbage which takes between 70 and 80 days to mature in the summer growing season. Red Pearl can be planted in the cool season and should take approximately 10 - 20 days more to mature and will retain its round heads. Red Pearl has excellent field tolerance and has good bolting tolerance.

CABBAGE

SAVOY CERVENA

Cervena is a red semi Savoy Cabbage.

CABBAGE

SAVOY EAGLE

Savoy Cabbage Eagle is an All Year Savoy Cabbage. It grows on a compact plant and produces a nearly round head. Eagle is suited to both baby and mature market segments.

CABBAGE

SAVOY FALCON

Savoy Cabbage Falcon is an All Year Savoy Cabbage. It grows on a compact plant and produces a nearly round head. Falcon is suited to both baby and mature market segments.

CABBAGE

TEMPLATE

Template is a Summer Cabbage. It has a compact plant and a round, rock hard head that weighs between 3 – 4 kg. Template matures in approximately 75 - 80 days. Template has YR and BR resistance and handles heat very well.

CARROTS

CARROTS

AMSTERDAM ITALIAN

Amsterdam Italian has been carefully selected to have the taste and quality the top chain stores demand. It is very uniform resulting in an excellent pack out.

CARROTS

COLOURS

In the Coloured Carrot range we have all the colours available, including a Red. They are called Nuclear Purple, Nuclear Yellow, Nuclear White, Nuclear Red and Nuclear Haze which has a Purple skin with yellow core, something special to see.

CARROTS

MORAN

Moran is a 100-120 day slightly tapered Nantes type carrot with a small core and rounded tip. Moran has strong, well attached leaves, and vibrant orange coloured roots that measure between 18 - 22 cm in length. Moran has excellent storage capabilities and shows excellent tolerance to Heat, Alternaria and Powdery Mildew.

CARROTS

SILUMA

Siluma is a 100 - 110 day slightly tapered Nantes type with a small core and rounded tips. Siluma has strong upright well-attached leaves. The well-coloured smooth roots are between 18 - 20 cm in length. Siluma has excellent storage capabilities. Excellent tolerance to heat and Alternaria Dauci

CAULIFLOWER

CAULIFLOWER

COLOURS

In the coloured Cauliflower range we have Island, Jessica and Macarena. Island has purple curds and takes on average 190 days to mature. Jessica is a lime coloured romanesco that matures in around 140 days. Macarena is a green cauliflower that matures in around 140 days. All 3 of the above mentioned products can be seeded for open field production at a density of between 35000 and 45000 seeds per hectare.

CAULIFLOWER

CORNIBUS

Cornibus is a loose head Cauliflower that produces a large head with long stems that easily gets cut into loose florets.

CAULIFLOWER

FIGARO

Figaro is well suited as a mature hot season Cauliflower. It is also ideal as a baby. Figaro takes on average 50 - 65 days as a baby and 75-80 days fully mature. The head of Figaro is brilliant white and has tight wrapper leaves. Figaro shows some resistance to BR.

CAULIFLOWER

GONZALES

Gonzales is a baby Cauliflower. Gonzales takes on average 50 - 55 days before being picked as a baby. Gonzales has a snow white curd and has good wrapper leaves protecting against sunburn.

CAULIFLOWER

VASSALO

Vassallo is well suited as a mature cool season Cauliflower. It is also ideal as a baby. Vassallo takes on average 50 - 65 days as a baby and 75 fully mature. Vassallo is snow white and has tight wrapper leaves.

CAULIFLOWER

VERDISSIMO

Verdissimo is a green Romanesco well suited to both baby and mature fruits. Verdissimo shows field tolerance to Fusarium.

CELERIAC

CELERIAC

HANSI

Hansi is a very high yielding variety suitable to all growing conditions and seasons. It has an exceptional shelf life with superb internal quality. Hansi takes about 160 days to mature.

CELERY

CELERY

COPIA F1

Copia have long heavy stems and can be cultivated All Year Round with dark rich green leaf colour. Copia is very uniform and has very good holding ability. Copia has shown good tolerance to bolting, cracking and Cercospora.

CELERY

LUNGISSIMA

Lunghissima has an exceptionally long shank and maintains its length in winter. Once cut to fit into sleeves the tops are then sold as soup celery.

CELERY

PRIMUS

Primus is an All Year Round variety. It has heavy stems of good length and has a rich green colour. Primus is very uniform and has very good holding ability. Primus has shown good tolerance to bolting, cracking and Cercospora.

CELERY

WIZARD F1

Wizard is an All Year Round variety. It has heavy stems of good length and has a rich green colour. Wizard is very uniform and has very good holding ability. Wizard has shown good tolerance to bolting, cracking and Cercospora.

CORIANDER

CORIANDER

SLOW BOLTING

Our carefully selected slow bolting strain of Slow bolting Coriander was selected in Italy for quality, yield and flavour.

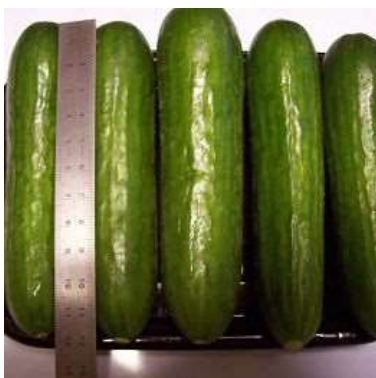

CORIANDER

TOP FLAVOUR

Top Flavour is our exclusive selection of American Slow Bolt. It has aggressive regrowth which allows up to 3-4 cuttings. It is very pungent with heavy, strong scented leaves. Top Flavour is less prone to bolting.

CUCUMBERS

CUCUMBERS

ACCENT

Accent fits into the 10 - 12 cm segment. It has multiple fruits per node with smooth dark green skin coloured fruits. Accent is suitable for spring, summer & autumn production periods in bags or in the soil. Accent has resistance to Cmv and Pm with Dm Tolerance.

CUCUMBERS

ATLAS

Atlas fits into the 16 - 18 cm segment. It has multiple fruits per node with smooth dark green skin coloured fruits. Atlas is suitable for spring & summer production periods in bags or in the soil. Atlas has resistance to Cmv and Pm with some Dm Tolerance.

CUCUMBERS

CANDICE

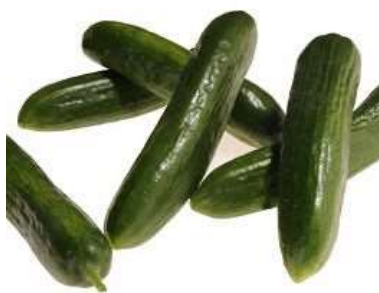

Candice fits into the 14 - 15 cm segment. It has multiple fruits per node with smooth dark green skin. Candice is suitable for spring & summer production periods in bags or soil. Candice has resistance to Cmv, Cvyv, Dm and Pm.

CUCUMBERS

COMPLET

Complet fits into the 34 - 36 cm segment. It has smooth dark green skin colour fruits. Complet is suitable for spring, summer & autumn production periods in bags or in the soil. Complet has good resistance to Pm and shows tolerance to Cmv and Dm.

CUCUMBERS

COOL CRUNCH

Cool Crunch is a Dark Green Beit Alpha type field cucumber. Cool Crunch has Zymv, Cmv, Wmv, Prsv and Pm resistance.

CUCUMBERS

DIEGO

Diego falls into the longer segment, measuring 36 - 38 cm with smooth dark green coloured fruits. It is best suited to the cooler season. It is suited to both soil and bag cultivation practices. Should you need XL fruits it can be planted in summer but attention must be paid to the control of Pm. Diego shows tolerance to Pm, Cmv and Dm.

HERBS

HERBS

BASIL

In Basil we keep Basil Curly, Basil Ibis (purple), Basil Mammolo, Basil Piccio, Basil Profumo, Basil Riviera Ligure, Basil Smooth leaf, Basil Sweet Leaf. The latter specifically for pots. For more information about the different types of Basil, feel free to contact the office.

HERBS

BASIL GARIBALDI

Basil Garibaldi has a medium plant size and a strong branch structure producing many side shoots for better yield and is slow to bolt. The leaves are very thick and dark green in colour, medium sized, oval convex shape. Garibaldi has excellent shelf life with a particularly intense flavour. Due to the very little lemon taste, it is preferred by the Italian pesto producers. Garibaldi can be produced for cut leaves for the fresh and processing market. Garibaldi has IR to Peronospora Belbahrii and Fusarium.

HERBS

CHIVES

In Chives we keep Broad Leaf Chives and Fine Leaf Chives. Broad Leaf Chives often is referred to as Garlic Chives and the Fine Leaf Chives as French Chives.

HERBS

DILL

In Dill we keep the standard Common Dill. Common uses for Dill include using the seeds for spices and the leaves for cooking.

HERBS

FENNEL GOLIATH F1

Goliath F1 was bred for uniformity, speed and bulb colour. Goliath F1 has a brilliant white coloured bulb with crisp crunchy flesh that has excellent taste, with a medium compact plant perfect for summer production. Goliath F1 shows good field tolerance to over maturing.

HERBS

FENNEL ROMY

Fennel Romy was selected for uniformity, rapid growth and taste when producing baby fennel for the local and export market. If all goes well and in the summer season, Fennel Romy takes about 50 to 55 days to mature from seeding.

HERBS

GENERAL

We stock a variety of different herbs, including Garden Cress, Watercress, Chervil, Corn Salad, Dandelion, Dill, Endives, Fennel, Lemon Balm, Marjoram, Origanum, Rosemary, Sage, Sorrel Red & Green, Tarragon and Thyme.

HERBS

PARSLEY

In the Parsley stable we can offer 3 different types of parsley. Berlica, Italian and Moss Curled. Berlica is a rooted parsley. Italian is the trusted flat leaf parsley, and Arava is the frilly Moss Curled leaf type. We have treated and untreated seeds of both Italian Flat Leaf and Arava Moss Curled.

HERBS

TARRAGON RUSSIAN

In Tarragon we keep the standard Russian Tarragon which grows from seeds and becomes a bush roughly 1.2m tall in ideal conditions. Russian Tarragon is a fairly hardy plant and should grow just about anywhere. Russian Tarragon is best suited for culinary purposes as it has a good aroma and great flavour.

HERBS

WILD AND CULTIVATED ROCKET

In Rocket we keep both Wild and Cultivated Rocket. We have the Common Cultivated and Common Wild Rocket as well as a Wild Rocket for Summer Heat with Slow bolting properties and one for Winter production. We also have a Wild Rocket suitable for once-off mechanical pick and All Year Round Production.

KALE

KALE

GENERAL

In the Kale stable we have a couple different Kales. We start off with Cremisi which has a Curly red leaf with a red stem, Crimson Garden which has a curly green leaf with a red stem, Chino which has a curly green leaf with a green stem, Ivory Garden which has a curly green leaf with a white stem, Koral which has a spiked green leaf with a red stem and Tosca which has a black long leaf,

KOHLRABI

KOHLRABI

MIDNIGHT PURPLE

Kohlrabi Midnight is an early variety that grows roughly 30 - 35cm tall. The pale purple, flattened, globe shaped bulbs are smooth and tender and form above the ground. Midnight's uniquely flavoured white flesh tastes the best when the bulbs are 70 - 75 mm in diameter. Midnight takes on average 120 days from seeding to maturity.

KOHLRABI

MOONLIGHT

Kohlrabi Moonlight is an early variety that grows roughly 30 - 35cm tall. The pale green, flattened, globe shaped bulbs are smooth and tender and form above the ground. Moonlight's uniquely flavoured white flesh tastes the best when the bulbs are 70 - 75 mm in diameter. Moonlight takes on average 120 days from seeding to maturity.

OKRA

OKRA

DELELE F1

Delele F1 is a medium sized Okra, with dimensions of 13–18 cm long and 18mm - 22 mm thick. Delele F1 has a shiny, straight green hexagonal ribbed fruit that grows on a very tall plant that has resistance to Yellow Vein Mosaic Virus and Leaf Curl Virus. When setting fruits in the cool season, Delele F1 retains most of its length.

OKRA

MIME F1

Mime F1 is medium sized Okra, with dimensions of 13–15 cm long and 25 mm thick. Mime F1 has a shiny, straight green hexagonal ribbed fruit that grows on an indeterminate plant.

OKRA

RUSSET

Russet is medium sized Okra, with dimensions of 9–16 cm long and 20 mm thick weighing 14gr. Russet has a shiny red/rust well ribbed fruit that grows on a strong plant.

OKRA

TOPIC F1

Topic F1 is medium sized Okra, with dimensions of 13–16 cm long and 20mm - 25 mm thick. Topic F1 has a shiny, straight green hexagonal ribbed fruit that grows on a 1.5m - 1.7m plant.

OKRA

ZAFIR F1

Okra Zafir F1 is a very long Okra measuring 20–25 cm long and 22 mm thick. Zafir F1 has ribbed, straight, shiny green fruits that grow on a multi branching plant that has amazing yield potential..

ONIONS AND LEEKS

ONIONS AND LEEKS

CESENA

Cesena has become a variety recognised not only for its adaptability but also for quality and yield. It is a very long, large leek for the general market but it has now succeeded in setting the standard in the local baby leek sector.

ONIONS AND LEEKS

FIAMMA

Fiamma is our red spring onion. Fiamma has done well growing all year round.

ONIONS AND LEEKS

JUVON RED

Juvon Red is a red spring onion suitable for cultivation all year round. Juvon Red has multiple red skin layers with vibrant green leaves and a surprisingly small root plate at the base of the plant.

ONIONS AND LEEKS

KATAMA

Katama is a green Spring Onion that can be cultivated all year round. Katama presents well with its brilliant white base and vibrant green leaves.

ONIONS AND LEEKS

LONGIANO

Longiano has become a variety recognised in the green long shank class for quality and yield. It is a very long, large leek for the general market.

ONIONS AND LEEKS

PORIBLU

Poriblu is one of our exclusive blue/grey leafed leek suitable for both baby leek and mature leek segments. Poriblu is being exported with great success.

ONIONS AND LEEKS

PORILONG

Porilong is another one of our exclusive blue/grey leafed leek varieties suitable for both baby leek and mature leek segments. Porilong is currently being exported with great success.

ONIONS AND LEEKS

SHALLOT PINK STEM

Pink Stem is a pink stem shallot onion.

ONIONS AND LEEKS

SICA

Sica is a green/grey leaf leek ideally suited to baby leek segment. Sica handles the Highveld summer heat with ease.

ORIENTAL GREENS

ORIENTAL GREENS

ORIENTAL GREENS

In the Oriental Vegetable stable we have an impressive array. We start off with Crimson Lace and Crimson Red, Florida Green & Red Leaf, Golden Frill, Golden Streak, Komatsuna, Maruba Santoh, Mibuna Greens, Mizuna Green & Purple, 13 Different Pak Choi's, Ruby Streak, Sai Sai Green & Purple, Scarlet Frill, Shiso Green & Purple, Spicy Green and also Tah Tsai.

ORIENTAL GREENS

PAK CHOI ABIGAIL

In the Pak Choi stable we have a well proven bolting tolerant variety called Abigail. Abigail is compact in growth and has a very nice deep green colour that performs well in summer and winter production, and produces thick leaves. Abigail can be planted for both the baby and mature markets.

ORIENTAL GREENS

PAK CHOI EMILY

Pak Choi Emily is our bolting tolerant Pak Choi, to be planted in the spring slot when conventional Pak Choi varieties tend to bolt. Emily has a compact to medium plant frame with vibrant green thick leaves. Emily can be planted for the baby market or the mature market. Emily will perform flawlessly in the cool and warm season so it is safe to plant Emily all year round.

ORIENTAL GREENS

PAK CHOI TAIKO

In the Pak Choi stable we have a well proven product called Taiko. Taiko is compact in growth and has a very nice deep green colour that performs well in the heat of summer that produces thick leaves. Taiko can be planted for both the baby and mature markets.

PAPAYA

PAPAYA

PAPAYA

In the Papaya stable we have Tropical Red, an F1 Hybrid in the Solo Sunrise class. Fruits weigh .75 -1.2 kg with firm sweet red flesh. We also have Tainung #1 and Tainung #2, both producing round 1.1kg fruits. We also have Hawaiian Solo Sunrise that produces 0.5kg red fleshed fruits.

PAPAYA

RED LADY

Papaya, orange flesh, large fruit. Strong tolerance and good aroma.

PEAS

PEAS

GARDEN CONSULATE

Consulate has been developed specifically for the local and export markets. The plant produces even sized pods which are medium dark green. Consulate pips are 6-7 mm and is the variety of choice of the major chain stores. Consulate has a very good disease package, F2, Pm, Pemv, Blrv.

PEAS

MANGE TOUT FLAVA

Flava has been developed specifically for the niche markets. The plant produces Golden Yellow Coloured pods roughly 90mm x 21mm in size. Flava has very crisp pods that have a sweet taste which looks spectacular in a salad and can also be eaten raw.

PEAS

MANGE TOUT O.S.P. MK II

Our carefully selected strain of Oregon Sugar Pod II has shown very good tolerance to Powdery Mildew, Common Wilt 1, Enation Mosaic Virus & Western Pea Streak Virus. Our Oregon Sugar Pod II is the variety of choice of all the major chain stores and the export market.

PEAS

MANGE TOUT SWEET HORISON

Sweet Horison was selected for its resistance to cupping. Being slightly darker than O.S.P. it displays beautifully in the punnet. The aggressive plant ensures above average yields. Ideally suited to both local and the export market.

PEAS

SNAP LUSAKA

Lusaka has been developed specifically for the export market. The plant produces stringless, even sized pods 8-9 cm x 15 mm which are medium to dark green. Lusaka is a determinate plant not requiring trellising. Lusaka shows good field tolerance to Powdery Mildew.

PEAS

SNAP NAIROBI

Nairobi has been developed specifically for the export market. The plant produces stringless, even sized pods which are medium dark green. Nairobi is the variety of choice of the major chain stores. Nairobi shows some field tolerance to Powdery Mildew.

PEAS

SNAP RAISIN

Raisin has been developed specifically for the niche markets. The plant produces stringless, even sized pods which are purple in colour. Raisin is very sweet in taste and looks spectacular in a salad.

PEAS

SNAP SUGAR QUEEN

Sugar Queen has been developed specifically for the export market. The plant produces stringless, even sized pods which are medium dark green. Sugar Queen is the variety of choice of the major chain stores.

PEPPER HOT

PEPPER HOT

ANCHO GIGANTE

Ancho Gigante is a Ancho Poblano Type. Callisto and Calypso are Trinidad Scorpion types with around 1.9 million scoville units.

PEPPER HOT

BIG JIM

Big Jim was bred specifically for the processing industry. Big Jim has big fruits that are bright red measuring in at 150–180 mm long and 25–30 mm thick that have a lot of bite and flavour.

PEPPER HOT

BIRDS EYE CHISA

Chisa is a lime green to bright red Hot Pepper. Chisa has a lot of fire and plenty of flavour. Chisa measures in at 70–90 mm long and 9–11 mm thick weighing 4.5 gr. Chisa bears fruits upright on the plant. Chisa is VERY tolerant to hot moist weather.

PEPPER HOT

BIRDS EYE DECLINE

Decline falls into the bird eye class of hot pepper and measures 60–65 mm in length by 10–11 mm thick. When seeded in the cooler months Decline remains within the Export spec size. Decline is an exceptionally hot pepper which has flavour and is surprisingly tasty. Decline is tolerant to BW.

PEPPER HOT

BIRDS EYE FEROCITY

Ferocity falls between the Large Birdseye and Thai class measuring 70–90 mm long by 10–13 mm thick with roughly 350000 scoville units. Ferocity has good holding capabilities with excellent quality and flavour. The fruit on Ferocity starts as a deep vibrant green and turns to a dark shiny red colour when ripe and bears an exceptional yield. Ferocity can be planted at around 35000 seeds per Ha and shows very good field disease tolerances.

PEPPER HOT

BIRDS EYE FIRECRACKER

Firecracker falls in the Birdseye class measuring 60mm long by 8 mm thick. Firecracker has good holding capabilities with excellent fruit quality and flavour. Firecracker has high heat and an exceptional yield for its class. Perfectly suited to the Fresh Market and Pre-Pack Industries. Firecracker shows very good field disease tolerances.

PEPPER HOT

BIRDS EYE INCLINE

Incline falls into the bird eye class of hot pepper and measures 50 mm in length by 10 mm thick. Incline is an exceptionally hot pepper which has flavour and is surprisingly tasty. Incline is tolerant to BW.

PEPPER HOT

CAYENNE COSMIC

Cosmic falls in the Cayenne class measuring 120–130 mm by 13–14 mm thick. Cosmic has good holding capabilities with good fruit quality, flavour, intense heat and an exceptional yield. Cosmic has resistance to Virus and is tolerant to PB. Cosmic keeps its size well through the cooler season.

PEPPER HOT

CAYENNE GLOED

Gloed falls in the cayennei class measuring 140–160 mm long by 20–25 mm thick. Gloed has thick walls, good holding capabilities with good fruit quality, flavour, high heat and an exceptional yield. Gloed keeps its size well through the cooler season. Gloed has resistance to Tmv, Pvy and Bls 1-3.

PEPPER HOT

FRESNO LEMONE

Lemone is a large Fresno type hot pepper with dimensions of 150mm x 50mm and tipping the scale round 90g. Lemone is not extremely hot, but has good taste for a hot pepper.

PEPPER HOT

HABANERO MIXED

When it comes to Habanero, we have them all. Red, Yellow, Orange, White and even Brown. Typically a Habanero will grow to a length of no more than 5 maybe 6cm and range in heat between 100000 and 350000 scovilles.

PEPPER HOT

JALAPENO CHISPA

Chispa is a largish Jalapeno with a dark green skin and has brilliant flavour. Chispa measures in at 70mm x 30mm and should weigh around 38g when mature.

PEPPER HOT

JALAPENO FANTASTIQUE

Hot Pepper Fantastique is a Jalapeno type which measures 8-9 cm long and 3-3.5 cm wide with a wall thickness of 4 mm and weighs roughly 30 gr. Although mild by chillie standards it is relatively pungent but has a superb flavour. Fantastique shows good resistance to checking.

PEPPER HOT

JALAPENO LEDA

Marvellous falls in the Large Thai class measuring 150–160 mm by 14– 15 mm thick and weighs 18 gr. Because of the thick flesh Marvellous has good holding capabilities with good fruit quality, flavour, extreme heat and an exceptional yield. Marvellous keeps its size well through the cooler season. Marvellous is resistant to PVY.

PEPPER HOT

JALAPENO LEMON SPICE

Lemon Spice is a bright yellow Jalapeno with medium heat. It looks very appealing in a fresh salad.

PEPPER HOT

JALAPENO MAGNIFIQUE

Hot Pepper Magnifique is a smooth skin dark green to bright red Jalapeno which measures between 9 - 10 cm long and 2.8 - 3 cm wide with a wall thickness of 3 - 4 mm and weighs roughly 35 gr. Although mild by chillie standards it is relatively pungent but has a superb flavour. Under ideal conditions Magnifique takes about 120 days from sowing to first harvest. Magnifique sho

PEPPER HOT

LARGE SERRANO, BIZET

Bizet falls in the large Serrano class measuring 110 - 120 mm long by 20- 23 mm thick. Bizet has very thick walls, exceptional shelflife, good fruit quality, remarkable flavour, good heat and an exceptional yield. Bizet picks very easily off the robust and healthy plant and keeps its size well through the cooler season.

PEPPER HOT

THAI EXHIBITION

Exhibition falls in the Large Thai class measuring 120-130 mm by 14- 15 mm thick and weighs 7 gr. Because of the thick flesh Exhibition has good holding capabilities with good fruit quality, flavour, Intense heat and an exceptional yield. Exhibition keeps its size well through the cooler season.

PEPPER HOT

THAI FIAMMA

Fiamma falls in the large Thai class measuring 140-150 mm by 11-12 mm thick and weighs 8 gr. Starting life as lime green it turns to a bright red at maturity. Because of the thick flesh Fiamma has good holding capabilities with good fruit quality, extreme heat and an exceptional yield. Fiamma keeps its size well through the cooler season.

PEPPER HOT NUCLEAR

PEPPER HOT NUCLEAR

BHUT JOLOKIA, RISING SUN

Rising Sun is our Bhut Jolokia type hot pepper. Rising Sun measures round 6 - 8cm long and 2 - 2.5cm at the shoulders. As heat goes, Rising Sun tips the scales at around 1 million scorching scovilles.

PEPPER HOT NUCLEAR

CALLISTO & CALYPSO

Callisto and Calypso are Trinidad Scorpion types measuring around 1 million scoville units, for those that like things hot!

PEPPER HOT NUCLEAR

IGUALA

Iguala is our Carolina Reaper Hot Pepper. Everybody knows Carolina Reaper to be the hottest pepper out there measuring well over a million scovilles, for those who want to punish their tastebuds!

PEPPER SWEET

PEPPER SWEET

ATHENA

Athena is a hybrid Red Pepper for field production that grows to a height of about 1.2 m when trellised and bears fruits roughly 90 x 90 mm x 220 - 250 gr. The fruits of Athena change from green to a Post Box red when ripe and should be planted at 33 m plants per Ha. Athena has resistance to L4, Tswv.

PEPPER SWEET

FIELD JALASWEET

Sweet Pepper Jalasweet is a Jalapeno type pepper with no or VERY little "burn" measuring 7 - 8 cm in length by 2.0 - 2.5 cm wide with a wall thickness of roughly 3 mm and weighing roughly 25 gr. It has a typical Sweet pepper flavour. Jalasweet should be picked green. Jalasweet shows good tolerance to checking.

PEPPER SWEET

GRANIT

Granit is a hybrid Yellow Pepper for field production that grows to a height of about 1.2 m when trellised and bears fruits roughly 90 x 90 mm x 220 - 250 gr. The fruits of Granit change from green to a brilliant yellow. Granit should be planted at 33 m plants per Ha and has resistance to L4 & Tswv.

PEPPER SWEET

KAPYA

In the Kapya class we have the 3 main colours available. Red, Yellow and Orange. Kapya is a sweet pepper measuring in at 150mm x 50mm that weighs 90g. All 3 colours of Kapya Sweet Peppers are resistant to Tmv2.

PEPPER SWEET

MARCONI

In the Marconi stable (that is fruit measuring 200mm x 70mm and weighing 300g) we have Red, Yellow and Orange in colour. Marconi Red has Tmv2, (L3) & Tswv resistance. Marconi Yellow and Marconi Orange only have resistance to Tmv2.

PEPPER SWEET

RAMIRO

In the Ramiro Sweet Pepper class we have all 3 colours, Red, Yellow and Orange. Ramiro Peppers measure 200mm x 30mm and should weigh around 120g when mature. All 3 of our Ramiro Sweet Peppers have Tmv1 resistance.

PEPPER SWEET

SWEET HEART

In the Sweet Heart Pepper Range we have the 3 main colours. Red, Yellow and Orange. They are very small and very sweet with brix as high as 11–12.

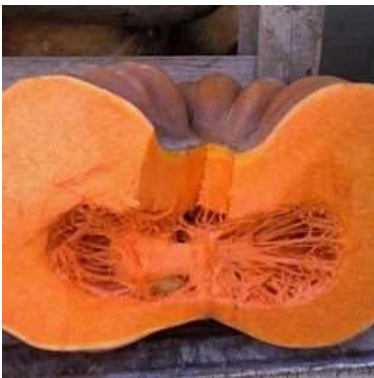

PUMPKINS

PUMPKINS

AFRICAN GREY

African Grey is a grey skin ribbed pumpkin that produces fruits between 5 and 7kg on a vining plant. The outer grey skin on African Grey is robust which allows you to store the pumpkin for a fair amount of time. The bright orange flesh is crisp and unbelievably tasty and has a small seed cavity of a pumpkin of its size.

PUMPKINS

MUSKRAT

Muskrat is a large very ribbed pumpkin with bright orange flesh. The outer skin of Muskrat turns a deep rich brown colour when ripe. The bright orange flesh has the most amazing taste which makes it the choice of chefs. Muskrat has fruits weighing in at 8 to 10kg.

PUMPKINS

TURUNCU

Turuncu is a large halloween pumpkin that will produce large pumpkins around 5 - 7kg in size. Turuncu has this deep vibrant orange skin which makes it attractive for pumpkin carving. Turuncu shows resistance to Pm2.

RADICCHIO

RADICCHIO

MIXED

As far as Radicchio is concerned we have a large variety available. From round green heads to long red ones. Brenta is a green round head that takes around 75 days to mature. 1605 is a red long leaf for the loose leaf market that takes around 100 days to mature. Ulisse is a green bullet shape that reaches maturity in about 75 days. Rosanna is a loose head all red variety that matures in about 110 days. Rosalba is a pinkish red loose head variety that matures in around 130 days. Conico is a deep maroon bullet shaped head that reaches maturity in about 60 days. Preggo is a deep maroon round head radicchio that reaches maturity in about 60 days.

RADISHES

RADISHES

CHERRY RED F1

Cherry Red F1 is a round vibrant smooth skin Red Radish with crisp Snow White flesh and a very small and thin root. The internal fruit quality of Cherry Red F1 is outstanding.

RADISHES

GENERAL

We have radishes fitting all shapes and lengths. Baseball is a large round white radish. Bic is a french breakfast type Blanco is a white round radish. Cherry Belle is a red round shape. Chinese 1/2 Long is an elongated, white & green skinned radish with green flesh. Chinese Short Red is elongated with red skin and white flesh. Daikon is a long white one. Gogo #2 is a white Diakon 20 cm x 8cm. Karami Green is a round, green skin radish with green flesh. Mini Diakon Purple is oval, purple skin and purple fleshed. Mini Diakon Red is round with red skin and flesh, Negro Longano is a black carrot shaped radish. Parker is a french breakfast type. Pink Lady is round in shape and pink in colour. Purple Star is round and purple. Rido Red Watermelon is a round white with green shoulders and red flesh. Star is a ded round with white tip. We also do a rainbow basket which consists of all round varieties, Black, Pink, Red, Red & White, Purple and White.

RADISHES

RADISH CHERRY SWEET F1

Cherry Sweet F1 is a round vibrant smooth skinned Red Radish with crisp Snow White flesh and a very small and thin root. The internal fruit quality of Cherry Sweet F1 is outstanding. Cherry Sweet F1 is suitable to grow in tunnels and open field production. Cheery Sweet F1 works well for bunching and is tolerant to bolting.

ROOTSTOCK

ROOTSTOCK

ROOTSTOCK

We have rootstocks for Tomatoes, Cucumbers, Squashes, Watermelons and Sweet Melons. Rootstock Conqueror has resistance to Fus, N and adds Vigour and can be used on both Cucumber and Watermelon. Warlord is a Watermelon rootstock with resistance to Fusarium and Cold Weather. Warrior for Watermelon and has resistance to N, Fus, Anthr. Cosmos is our Pepper Rootstock and has resistance to N, Ph. Matterhorn is just one of our Tomato rootstocks with resistance to V, F3, Tmv, N, Fcr, PB, Bw. Powapak is another Tomato Rootstock and has resistance to V, F3, Tmv, N, Fcr. Manaslu is another Tomato rootstock with resistance to V, F2, Tmv, N, Fcr, Fr, Pb.

SOYA

SOYA

EDAMAME EDIBLE

We have two types of Edamame. Hikada, which has smaller kernels and is best suited to Spring sowings whereas Hokkaido has slightly larger kernels and better suited to Summer sowings.

SPINACH

SPINACH

SKATE

Skate is a hybrid spinach with slightly elongated spoon shaped leaf suitable for cooler season production due to its bolting tolerance. Skate has a nice dark deep green colour with extremely thick leaves. Skate takes approximately 50–55 days to start harvesting and has resistance to Dm 1–7, 11, 13, 15 and 16.

SQUASH

SQUASH

BUTTERNUT BUTTERBEE

Butterbee produces butternuts that weigh around 1kg to 1.2kg. The flesh is nice and firm and tastes almost sweet. The skin turns a almost golden tan brown colour when ripe.

SQUASH

BUTTERNUT BUTTERBIRD

Butterbird is a larger butternut that produces fruits between 2kg to almost 3kg in size. The flesh quality in Butterbird is exceptional and stores well after harvest.

SQUASH

BUTTERNUT CLONE

Clone is a butternut with dark and light green stripes that packs beautifully as a baby butternut. If grown to full maturity it will reach a weight of 2.5-3.0 kg. When mature, Clone has delicious sweet deep orange flesh. Because of a very vigorous plant Clone has little trouble with disease pressure although it is always advisable to act preventatively.

SQUASH

BUTTERNUT DAFFODIL

Daffodil is a yellow skinned, yellow fleshed butternut that starts life yellow and ends yellow. Daffodil has a small seed cavity. It is well suited to the baby veg segment.

SQUASH

BUTTERNUT DESTINY

Destiny is a hybrid runner butternut that is shaped like the good old standard Waltham with fruit that weighs between 1.2 - 1.5 kg. Destiny is very uniform in fruit shape resulting in higher yields. Destiny should be seeded at 12m per ha. Destiny shows a natural tolerance to mildew.

SQUASH

BUTTERNUT STOR

Stor is a hybrid runner butternut that is shaped like the good old standard Waltham with fruit that weighs between 2 - 2.5 kg. Stor is very uniform in fruit shape resulting in higher yields. Stor should be seeded at 12m per ha. Stor has tolerance to Zymv & PM.

SQUASH

BUTTERNUT TAN

Tan is a hybrid runner butternut shaped like a ball with fruit that weigh 500 grams. Tan has a buff skin with deep orange sweet flesh. Tan is ideally suited to stuffing. Tan should be seeded at 12 m per ha.

SQUASH

BUTTERNUT TRIUMPH

Triumph is an early hybrid runner butternut that is shaped like Waltham with fruit that weighs between 0.9 - 1.1 kg. Triumph has fine textured, sweet, deep orange flesh. Triumph is very uniform in shape resulting in very mostly Grade 1 fruits. Triumph should be seeded at 12m per ha. Being early, Triumph shows a natural tolerance to infection.

SQUASH

BUTTERNUT WALTHAM SELECT

Waltham Select is our selection of the good old standard Waltham. It has been rouged over the last couple of years for uniformity in fruit shape and size and overall plant healthy. It produces butternuts that weigh around 1.2kg to 1.5kg. The flesh is nice and firm and has a brilliant butternut taste. The skin turns a almost golden tan brown colour when ripe.

SQUASH

MARROW BERBE

Berbe is a medium dark green Baby Marrow that can be used in the local, export pre pack and also processing sectors. It has a vigorous open plant with minimal spines. Berbe has long picking stems which makes it very easy to pick. Berbe can be seeded at 10–12 m per ha. Berbe has resistance to Zylcv, Wmv11, Slcv & Pm2. Berbe was selected as a backup should Obsidian not be available.

SQUASH

MARROW BLADY

Blady is a very early, green Baby Marrow used for frying with the flower attached. It has thin long fruits on a vigorous open plant with minimal spines. Blady can be seeded at 10–12 m per ha. Blady is perfectly suited to the Mediterranean countries and Mexican market segments. Blady has resistance to Zylcv, Wmv11, Podi Virus.

SQUASH

MARROW BLEK

Blek is a very early, green Baby Marrow used for frying with the flower attached. It has thick fruits on a low open plant with minimal spines. Blek can be seeded at 10–12 m per ha. Blek is perfectly suited to the Mediterranean countries and Mexican market segments. Blek has resistance to Zymv, Wmv11, Podi Virus.

SQUASH

MARROW GOLDEN GAL

Golden Gal is a yellow Baby Marrow. It can be used for the local and export pre pack market. Golden Gal has a semi open plant with very few spines so it picks easily. Golden Gal can be seeded at 15 m per ha. Golden Gal has resistance to Zymv and Cmv.

SQUASH

MARROW GOLDEN LAD

Golden Lad is a yellow Baby Marrow. It can be used for the local and export pre pack market. Golden Lad has a semi open plant with very few spines so it picks easily. Golden Lad can be seeded at 15 m per ha. Golden Lad has resistance to Zymv and Cmv.

SQUASH

MARROW OBSIDIAN

Obsidian is a medium dark green Baby Marrow that can be used in the local, export pre pack and also processing sectors. It has a vigorous open plant with minimal spines. Obsidian has long picking stems which makes it a treat to pick. Obsidian has become a market leader and can be seeded at 10–12 m per ha. Obsidian has resistance to Zylcv, Wmv11, Slcv & Pm2.

SQUASH

MARROW SUNGLOW

Sun Glow is a bright yellow marrow with light yellow lines on it. The flesh of Sun Glow is just like that of a conventional marrow.

SQUASH

PATTYPAN SUPERGREEN PATTI

Supergreen Patti is a green Patty Pan used for the local and export pre-pack markets. Supergreen Patti is high yielding and has a fairly small open plant with moderate to few spines which makes picking fairly easily. Supergreen Patti is seeded at 15–17m seeds per ha. Supergreen Patti is also well adapted to the processing industry needs.

SQUASH

PATTYPAN SUPERNOVA

Supernova is a yellow Patty Pan. It can be used for the local and export pre pack market. Supernova has a semi open plant with very few spines, so it picks fairly easily. Supernova is seeded at 12–15 m per ha as it is an aggressive grower.

SQUASH

PATTYPAN SUPERYELLOW PATTI

Superyellow Patti is a yellow Patty Pan. It is used for the pre-pack local and export markets. Superyellow Patti is a high yielding but fairly small open plant with very few spines which makes picking fairly easily. Superyellow Patti is seeded at 15–17 m per ha. Superyellow Patti is also well adapted to the processing industry needs.

SQUASH

SQUASH BLACK BALL

Black Ball is a bush type dark green round baby marrow, with Podi virus Complex resistance. Black Ball must be seeded at 15 m / Ha.

SQUASH

SQUASH BLOTCHY

Blotchy is a mottled green skinned bulbous baby marrow which takes 45 days to pick. Blotchy looks amazing when added to a mixed squash pack. Blotchy has tolerance to Podi Virus.

SQUASH

SQUASH DEED

Deed is an orange fleshed, orange skinned mini runner pumpkin which takes 80 days to maturity achieving a weight of 500 grams. Deed is a one man pumpkin with very sweet and firm flesh ideal for stuffing. Deed has tolerance to Powdery Mildew 1.

SQUASH

SQUASH DEGREE

Degree is an orange fleshed, green skinned mini runner pumpkin which takes 80 days to maturity achieving a weight of 500 grams. Degree is a one man squash with very sweet and firm flesh ideal for stuffing. Degree has shown tolerance to Powdery Mildew 1. When planted with Degree and Diploma a beautiful mixed Squash pack is created with the three colours: White, Orange and Green.

SQUASH

SQUASH DEPLOMA

Deploma is an orange fleshed, white skinned mini runner pumpkin which takes 90 days to maturity achieving a weight of 500 grams. Deploma is a one man pumpkin with very sweet and firm flesh ideal for stuffing. Deploma has tolerance to Wmv and Powdery Mildew 2.

SQUASH

SQUASH FLOWERING

We have a number of varieties dedicated to eating just the flowers or flowers with the marrow attached. Apulia, Blady, Blek, Zelena all have different marrow shapes with vibrant, large yellow flowers and well attached marrows. Both male and female flowers are eaten.

SQUASH

SQUASH GEM SPHENE

Sphene is a runner Gem Squash. Due to its perfectly round fruits, Sphene can be used as a full sized gem or picked small as a baby gem. Sphene can be planted at 18 m plants per ha. Like ALL Gem Squashes care must be taken to control Powdery Mildew.

SQUASH

SQUASH HULLESS

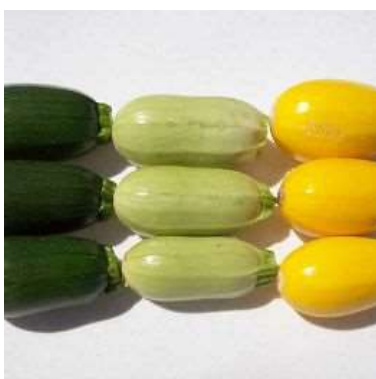

Alba and Gourmet are both hulless Seed squashes that produce fruits roughly 1kg in size. When we say hulless we mean the seed is in fact "naked" with no hard shell covering the soft inside seed. Used exclusively in the Health Food sector

SQUASH

SQUASH KABOCHA

We have various coloured kabocha flattened round squash of 1.5kg in size. There are also varieties weighing 500gr available. Kabocha squashes are best for roasting and stuffing.

SQUASH

SQUASH OVALS

Egg shaped Squash looks like a short fat egg shaped marrow. They come in 3 different colours. Green, Pale Green/White and Yellow.

SQUASH

SQUASH SARAH

Sarah is a semi bush white Gem Squash that weighs roughly 500g. Sarah has resistance to Podi virus Complex and Pm2.

SQUASH

SQUASH SONIC

Sonic is a bush type bright yellow round baby marrow. Sonic has resistance to Podi virus Complex.

SQUASH

SQUASH SPHAGHETTI

Golden Globe is an Orange Skin and Bright cream fleshed Spaghetti Squash weighing 500 gr. Ideal for 2 people. Golden Globe has tolerance to Podi Virus. Tandi is a Tan skin 1.5 - 2.0kg family sized Spaghetti Squash.

SQUASH

SQUASH STRAIGHT CROOKNECKS

Crookneck marrows traditionally had bent necks and a belly. This is a crookneck marrow with a short straight neck and a belly. And comes in 2 different colours, Green and Yellow.

SQUASH

SQUASH TABLE JACK

Table Jack is a dark green Table Queen type squash that produces fruit 1kg in weight with a ribbed rind. The internal colour turns from yellow to almost orange when it is completely ripe.

SQUASH

SQUASH THAMBI

Thambi is a vegetable spaghetti squash that produces oblong shaped fruits that weigh 1.5kg to maximum 2kg. When Thami is cooked the strings in the flesh come apart to form what then looks like spaghetti which is very healthy and full of flavour.

SQUASH

SQUASH UCHIKIKURI

Uchikikuri is an orange Kabocha squash that bears fruits 1.5kg in size and has a pear like shape. Kabocha squashes are best for roasting and stuffing.

SWEET MELON

SWEET MELON

HONEYGOLD

Honey Gold is a green fleshed Honeydew Sweet Melon. It matures in 85-90 days in the main growing season and produces fruits weighing 2.5-3.5 kg. Honey Gold is round to rounded oval in shape with a very smooth ivory rind when ripe. Honey Gold has resistance to Fusarium 1, 2 and excellent field tolerance to Powdery Mildew 1.

SWEET MELON

SAGINAW

Saginaw is an Orange fleshed Western Shipper Sweet Melon. It matures in 80-85 days weighing 2.0-2.5 kg. Saginaw is oval to round with a very coarse rind. Saginaw is monoecious and is very well suited to season change when bees are not very active. Saginaw shows resistance to Fusarium 0, 1, 2 and Powdery Mildew.

SWEET MELON

SAPONI

Saponi is an Ivory skinned bright green fleshed Honeydew Sweet Melon. It matures in 80-85 days weighing 1.8-2.2 kg. Saponi has high brix with a small cavity and is round to oval with very a strong plant resulting in good field tolerances.

SWEET MELON

SENECA

Seneca is an Ivory/Pale green fleshed Yellow Canary Sweet Melon. It matures in 75-80 days weighing 3-4 kg. Seneca has a yellow skin, high brix and is oval with resistance to Fusarium 1, 2, Alternaria and Gummy Stem Blight.

SWEET MELON

SHANEL

Shanel is a green fleshed Honeydew Sweet Melon. It matures in 85-90 days weighing 2.5-3 kg. Shanel is round with a very smooth ivory rind. Shanel has resistance to Fusarium 1, 2 and Powdery Mildew 1.

SWEET MELON

SHUAR

Shuar is an Orange fleshed Western Shipper Sweet Melon. It matures in 80-83 days weighing 3-3.5 kg. Shuar is oval to round with high brix and a very coarse rind. Shuar has resistance to Fusarium 0, 1, 2. Powdery Mildew 2 and Alternaria.

SWEET MELON

SIOUX

Sioux is an Orange fleshed Western Shipper Sweet Melon. It matures in 80-85 days weighing 2.5-3 kg. Sioux is oval to round with a very coarse rind. Sioux has resistance to Fusarium 0, 1, 2. Pm 2, Alternaria and Angular Leaf Spot.

SWEET MELON

SOOKE

Sooke is a unique orange fleshed Honeydew Sweet Melon. It matures in 85-90 days weighing 3-3.5 kg. Sooke is round with a very smooth ivory rind. Sooke has resistance to Fusarium 1, 2 and Powdery Mildew 1.

SWEET MELON

SQUAXIN

Squaxin is an Ivory fleshed Piel de Sapo Sweet Melon. It matures in 85-90 days weighing 2.5-3.5 kg. Squaxin is oval to round with high brix, unique flavour and a green mottled rind. Squaxin has resistance to Powdery Mildew 1

SWEET MELON

SYCUAN

Sycuan is an Orange Flesh Sweet Melon sporting a thick corky grey rind with Sutures. It matures in 85 - 90 days weighing 6.5 - 8.5 kg. Sycuan is oval in shape with high brix and a unique musky flavour. Sycuan has resistance to Powdery Mildew 1 & 2 and Watermelon Virus

SWISS CHARD

SWISS CHARD

SWISS CHARD

In the Swiss Chard stable we have Ford Hook Giant Imported as well as Red Ruby which has the red vein and stem with the green leaf, Melyn which has the yellow vein and stem with the green leaf and Ravina which is a green vein green stem green leaf for baby leaf production. We found all the above mentioned varieties works well being planted all year round.

TOMATOES

TOMATOES

CHERRY ACHICO

Achico is a determinate growing red cherry that produces fruits between 15 and 25g in size in the main growing season planting at a density of 12m per hectare and has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY CRIMSON

Crimson is an Indeterminate Tiger Striped Cherry Tomato, with fruits that are red with green 'tiger stripes' over it. The flesh of Crimson is a dark red and has a unique flavour and is sized at 20-25 gr. Crimson has resistance to V, F2 and N.

TOMATOES

CHERRY GREEN GLO

Green Glo is an Indeterminate Green skinned Cherry Tomato that weighs 15 – 20 gr. Green Glo was bred to be picked as loose fruits. Green Glo has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY LOUISE

Louise is an Indeterminate Red Cherry Tomato that weighs 15 – 25 gr. The truss ripens fairly evenly which lends itself to be used as a cluster variety. Louise has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY RED BARON

Red Baron is a determinate large Red Cherry Cocktail Tomato that 20 – 25 gr. Red Baron was bred to be picked as loose fruits. The fruits are very tasty and have high Brix. Red Baron has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY ROBIN

Robin is an Indeterminate Red Cherry Tomato that weighs 10–15 gr. Robin has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY SANTINA

Santina is an Indeterminate Dark Red Cherry Tomato that weighs 30 – 40 gr with maroon red fruits when ripe. Santina has resistance to V, F2 and Tmv.

TOMATOES

CHERRY TESSA

Tessa is an Indeterminate Orange Cherry Tomato that weighs 15 – 30 gr. Tessa was bred as a cluster variety but can be picked as loose fruits. Tessa has resistance to V, F2, Tmv and N.

TOMATOES

CHERRY TWEETIE

Tweetie is an Indeterminate Yellow Cherry Tomato that weighs in at 15–30 gr. The fruit remains on the truss fairly well. Tweetie has resistance to V, F2, Tmv and N.

TOMATOES

COCKTAIL SNAPPER

Snapper is an Indeterminate Red Cocktail Tomato that weighs 3–40 gr. The fruits turn a good colour red and remain firm for some time. Snapper has a great flavour and is resistant to V, F2, Tmv, N and Fcr.

TOMATOES

INDIGO RANGE

The entire Indigo range consists of purple shoulder fruits and skin and flesh of different colours. There are Cherries, Mini Plum, and Cocktail sizes of fruits. Having a remarkable flavour and being exceptionally healthy are the main attributes of this range of varieties. The entire Indigo Range has V, F2, Tmv resistance.

TOMATOES

PLUM MINI HELEEN

Heleen is an Indeterminate Red Mini Plum Tomato that weighs 20–25 gr with vibrant red fruits when ripe. Heleen is well suited to cluster production. Heleen has resistance to V, F3, Bacterial Speck

TOMATOES

PLUM MINI PHUMBA

Phumba is an Indeterminate Red Mini Plum Tomato that weighs 10–15 gr with vibrant red fruits when ripe. Phumba has resistance to V, F2, Leaf Spot, and Late Blight.

TOMATOES

PLUM MINI PLUTO

Pluto is an Indeterminate Orange Mini Plum Tomato that weighs 15–25 gr with bright orange fruits when ripe. The even ripening lends itself to be used as a cluster. Pluto has resistance to V, F2 and Tmv.

TOMATOES

PLUM MINI RUBRA

Rubra is an Indeterminate Tiger Stripe mini Plum tomato, with fruits that are red with green 'tiger stripes' over it. The Flesh of Rubra is dark red and has a unique flavour. Rubra weighs in at 15–25 gr. Rubra has resistance to V, F2, Tmv.

TOMATOES

PLUM MINI SHIRLEY

Shirley is an Indeterminate Yellow Mini Plum Tomato that weighs 15–25 gr with bright yellow fruits when ripe and remains firmly attached to the truss. Shirley has resistance to Tmv, V and F2.

TOMATOES

PLUM MINI SNOOPY

Snoopy is an Indeterminate Red Mini Plum Tomato that weighs 20 – 30 gr. The fruits remain on the truss fairly well. Snoopy has resistance to V, F2, Tmv and N

TOMATOES

POTTING CHERRIES

In the Potting category of Cherry tomatoes we have several varieties. We have varieties with VERY small plants varying in height from 100mm to 250mm.

TOMATOES

PROCESSING BAGIO

Bagio is a determinate growing red processing blocky round shaped tomato that weighs up to 80 - 90g when planted in the main growing season at around 12m per hectare and has resistance to V, F2, Tmv, N, BW and Cl.

TOMATOES

PROCESSING FLENDER

Flender is a red determinate growing roma shape processing tomato planted for the drying market that weighs around 70g when planted in the main growing season at a density of 12m plants per hectare and has resistance to V, F2, Tmv, N, Bacterial Spec and Tswv.

TOMATOES

PROCESSING RED BRILLAR

Red Brillar is a determinate growing red processing blocky shaped tomato that weighs up to 90g when planted in the main growing season at around 12m per hectare and has resistance to V, F2, Tmv, N, Bacterial Spec and Tswv.

TOMATOES

PROCESSING RED GOLD

Red Gold is a red determinate large Saladette tomato which can be left on the ground or raised by three strings. Perfectly suited for the fresh market that weighs around 140-160g when planted in the main growing season at a density of 12m plants per hectare. Red Gold has resistance to V, F3, Tmv, N, Bacterial Spec, Tylcv & Tswv. Tolerance to ToBRV.

TOMATOES

PROCESSING RED HAKY

Red Haky is a red determinate growing roma shape processing tomato that weighs between 70 and 80g when planted in the main growing season at a density of 12m plants per hectare and has resistance to V, F2, Tmv, N, Bacterial Spec and Tswv.

TOMATOES

PROCESSING RED HEART

Red Heart is a Red Determinate Saladette Tomato which can be left growing on the ground.
